4 easy ways to reduce idling:

1. Turn off the engine if you will be stopped for more than 10 seconds (except in traffic).
2. Reduce warm-up idling time. Newer vehicles only need 30 seconds. Ensure windows are clear before moving and then drive the vehicle to warm it up.
3. Minimize use of remote starters, especially during mild weather. Newer vehicles only need 30 seconds. Ensure windows are clear before moving.
4. Plug-in your vehicle to a block heater in cold weather. Use an automatic timer to turn on the block heater two hours before you plan to leave.
